Come see the new Foothill Regional Medical Center!

Building upon our tradition of providing quality, compassionate healthcare to the community, Foothill Regional Medical Center has embarked upon an exciting new chapter in its history. Under new ownership, the hospital – which is located in Tustin, in the heart of Orange County – now offers an expanded range of quality medical services and programs in a restful, healing environment that has been extensively remodeled and upgraded. We are Orange County’s newest general acute care hospital – the hospital our community needs and deserves!

New, Expanded Services

Foothill Regional Medical Center is a 177-bed general acute care hospital that includes a respected 42-bed pediatric subacute unit – the largest such program in Orange County. Over the years, we have become known for providing loving care to children who are too ill or technologically dependent to receive care at home.

Now, we have added a wide range of quality medical and specialty services for adults, including extensive inpatient and outpatient surgery, to augment the treatment options that we have historically offered the community. To achieve this, we have recruited experienced community physicians and specialists to our medical staff. We have also made a significant investment in providing our doctors and surgeons with the advanced tools and technology they need to help them produce the best outcomes for our patients. And to ensure that patients who visit or stay with us have the most comfortable – and comforting – experience we can provide, we have transformed the physical surroundings of the hospital. Best of all, we still offer plenty of free on-site parking!

Key Facts

  - Imaging/radiology
  - Nuclear medicine
  - 5 operating rooms
  - Respiratory therapy
  - Pharmacy
  - Physical therapy
  - Occupational therapy
  - Speech therapy
Our New Look
If you haven’t visited Foothill Regional Medical Center recently, you might not recognize us. That’s because we’ve put a great deal of creativity and resources into renovating and remodeling the areas in the hospital that our patients care about the most. These include our newly restyled, comfortable patient rooms, including several with glass doors opening onto private patios, spacious bathrooms, and plenty of extra room for a loved one to stay overnight. All of our private and semi-private rooms have new high-tech patient beds and bedside equipment. Throughout the rest of the hospital, we’ve installed new floors, artwork and furnishings, and repainted walls in bright, warm colors.

Our New Technology
One of our key priorities has been making sure our physicians and surgeons have the advanced technology they need to care for our patients. So, we have invested in new surgical technology – including sophisticated laparoscopic video monitors and other electronic equipment – in our five renovated operating rooms. We have also installed an advanced continuous patient monitoring and telemetry system that allows physicians to immediately access patient care data from anywhere in the hospital. The technology is designed to support physicians’ decision-making and help improve patient care.
